

Abstract

A system and method for enabling a graphical programming development environment to provide suggested graphical programming operations, such as suggested nodes or icons to include in a graphical program. User input specifying one or more nodes to include in the graphical program may be received. The one or more specified nodes may then be included in the graphical program. One or more suggested nodes to include in the graphical program may be then be automatically displayed or otherwise suggested to the user. The one or more suggested nodes may be based on the nodes already included in the graphical program. In various embodiments, the one or more suggested nodes may be displayed or otherwise suggested in various ways.
